**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Whitehead et al (2004/0095558). For claims 1, 6, 17, 21, 22, Whitehead et al disclose a high range display device that has a first spatial light modulator (SLM) array that has pixels and adjusts for color and a second SLM that modulates the light from the first SLM (see sections [0010, 0029, 0049] and claims 11, 14, 26), but, their dynamic range is a ratio which is different than the claimed 'luminescence output' parameter, however, it would have been obvious to one of ordinary skill in the art to convert to a different type of scale of luminosity depending on the amount and fine tuning that is required for the system. The alignment and filtering of the first array of pixels with respect to the second array of pixels is an obvious design choice that improves the images final projected resolution.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Blackham et al (5978142) discloses to SLM's right after each other where optical enhancement of brightness and contrast is achieved by a driving signal to the second modulator (see col. 2, lines 42-56).
